

# Passport XChange™ for Windows

from Embassy Software Inc.

# Finally, an affordable data integration package for small and medium sized businesses!

PassportXChange is an any to any data translator built for demanding EDI or XML requirements. It provides a dual function for your data integration needs. First it is your data interchange link to all of your trading partners providing accurate, secure, and almost instantaneous exchanges. That makes you a valued partner with many of the largest companies in North America.

Second, the ability of PassportXChange to convert data from any format to any other format allows it to be used inter-

nally as well as externally with trading partners. For example data can be converted from an XML format used by many new applications to flat file formats used by many legacy applications. This flexibility puts you in the driver's seat with respect to data transformation requirements.

**If you had to pick one area that might well have the greatest impact on your business over the next five years, this application would be it.**

## Why Data Interchange with PassportXChange?

- One easy to use tool for all integration needs, both internal and external.
- Data can flow instantly from your trading partner directly into your back office system, eliminating hours of monotonous and error-prone clerical time.
- Powerful mapping tool to map any type of data in 50 percent less time than with comparable software products.
- Flexible scheduling module for running applications when and how you require.

## Why not!

Your trading partners are telling you why you need to become EDI or XML capable while new internal integration requirements continue to proliferate. An easy to use data integration tool is vital in the context of continuing business in future years. Although the reasons for becoming e-commerce capable are so compelling, there's always the "Why not?" Cost for hardware.... Cost for software (if I can find it).... Change the way we do business....

The answers to these and other questions may help eliminate your "why not":

- ★ PassportXChange supports almost any type of data transformation you'll require in formats that include XML, EDI, flat file, or ODBC compliant databases so no data transformation task internal or external is beyond your control.
- ★ PassportXChange is easier to use than other products, you don't have to be a Rocket Scientist to use the software.
- ★ PassportXChange is an integrated system which includes Internet communications for timely and cost effective data transmission. If you don't want to pay VAN charges, direct data transfer to external partners is also available to you.

## Features of Passport XChange

- Data Routing assures that your data is routed to the designated recipient and splits or separates data files by destination.
- Databanking lets you selectively reprocess, retransmit, archive and/or restore data.
- File conversions include almost any variation of EDI, XML, Flatfile or ODBC database call.
- Processes can be scheduled for execution prior to or after translation.
- Unattended operation is available for complete automation.
- Customized reporting by way of XSL style sheets.
- PassportXChange is a Windows-based PC system that will run on Windows 2000, NT, Windows XP, Windows ME, Windows '98, and Windows '95. It will not become obsolete within months of purchase.

## Features of Passport XChange Mapper

- PassportXChange Mapper provides capabilities to create file formats from any file format such as EDI, XML, or flat file. A "Field Generation" capability option allows you to have the system generate any number of fields to greatly reduce time spent in the mapping process.
- Drag and Drop Mapping allows you to take actual XML data, drag and drop the field names where you want the translator to move them.
- DTD to XML Template Generation means that only the DTD is needed to create the maps for XML translation.

- Import and Export Capabilities mean customers using PassportXChange can easily import a map you create.
- EDI Standard Templates provide access to any version of the X12 or EDIFACT standards for point-and-click mapping.
- Cross-referencing capabilities and multiple-map translation on a single incoming document
- Analyze feature points out potential problems detected on completed maps and applications.

*"We have done extensive market research and your product delivers a price/performance value associated with much more expensive products."*
